Measuring the soft factors in economic terms is being challenged. Individual's performances were described as competencies in order for them to performed, observed and assessed to obtain accreditation as competent. The study is restricted to IT companies in South India. The objective of this study is to do factor analysis and CFA for individual competencies. The questionnaires distributed to different companies were 300 of which 172 were received and only 151 questionnaires fulfilled the condition of the study. Factor analysis and Confirmatory factor analysis were done to provide a framework for a promising investigation in that field.

Introduction

Measuring the soft factors in economic terms is being challenged. Competency can be treated as a mediating factor between the requirements of a job and the potential capacity of an individual as competence-in-use. Definition of the term competence is not clear. According to Ruth (2006), depending on whether one is a psychologist, management theorist, HR manager, educationalist or politician, it takes on different emphases. Hence Hoffman (1999: 281) suggests that it "shifts according to the context of its use and requirements of the user". Boon and Van der Klink (2001), who define competencies in terms of three distinct perspectives: competencies as individual characteristics; competencies as characteristics of organizations; and the notion of competencies as a tool to structure and facilitate communication between education and the labor market. Despite the fact that the interest of this study is competencies as an individual characteristic, it is beneficial to clarify the constructs.

Individual's performances were described as competencies in order for them to performed, observed and assessed to obtain accreditation as competent. The assessment can be done on the basis of output required to demonstrate competent performance. Boyatzis, 1982¹, Sternberg and Kolligian, 1990 refer competency

to the underlying attributes of a person such as the knowledge, skills or abilities. This creates a focus on the required inputs of individuals in order from them to produce competent performances. The task of pursuing the development of competency descriptions may be an easier task when looking at specific input rather than indeterminate outputs in more complex jobs.

Review Of Literature

In a study conducted by Abraham et al., (2001) in USA, firms were surveyed and asked which competencies they consider descriptive of successful managerial employees, whether they use those competencies in appraising their managerial employees and which six competencies constitute their critical competencies. Out of the 277 survey respondents, 85.9% found the following six competencies to be the most critical: leadership skills, customer focus, results oriented, problem solver, communication skills and team worker.

According to Garavan and McGuire (2001) this reasoning advocates that the study of competencies should take place within a context which addresses the employee as a whole person. Thus we argue that a more holistic approach towards the competency model is needed. Hodkinson and Issitt (1995) argue for a more holistic approach to competence in the caring

professions, integrating knowledge, understanding, values, and skills that reside within the person who is the practitioner.

Personal traits cannot be avoided in a discussion of competencies. Some authors related to personal traits in competency models (Mangham, 1986; Barrick and Mount, 1991; McClelland, 1998; Mansfield, 2004; Boyatzis, 1982; Klemp and Spencer, 1982; Spencer and Spencer, 1993). White (1959) introduced motivation into the term competencies by presuming a relationship between cognitive competencies and motivational action. He defined competence as an effective interaction (of the individual) with the environment and added motivation in addition to competence as achieved capacity.

Especially the US approach emphasizes an individual's behavior and attributes, self awareness and social skills and is more personally oriented. McClelland (1998) states competencies are fundamental behavior and they are susceptible for learning. Harvey and Butcher (1998) describe the specific meta-abilities relevant to managers as meta-abilities (cognitive skills, self-knowledge, emotional resilience, personal drive). According to Harvey and Butcher (1998), cognitive skills, which are not solely defined by intellectual capacity, consist of the key thought processes required to understand and resolve problems or issues. Self-knowledge is the capability to see oneself as others do, being clear about one's own motivations and values, and distinguishing between one's own needs and those of others. Several approaches towards competency development exists (Mansfield and Mitchell, 1986; Fine, 1988; Cheetah and Chivers, 1998; Mirabile, 1998; Armstrong, 2003; Serpel and Ferrada, 2007).

Competence is characterized by both knowledge and skills.

Every individual has three competency areas to varying degrees:

Personal

Professional/technical

Entrepreneurship

(entrepreneurship, leadership, management)

Personal Competencies

Personal competencies are about who we are, and have both intra-personal and inter-personal

components. Intra-personal competencies are about the self. They include the basics of anticipation, aptitude, comprehension, deliberation, preferences, and stress tolerance. Inter-personal competencies include both oral and written communications, and the ability to build relationships with others.

Professional/Technical competencies

The terms "professional" and "technical" can be used broadly or narrowly. When used broadly, the terms apply to domain knowledge in subject areas, and the accompanying technical skills. Subject areas include both arts and sciences disciplines – business is both an art and a science. Subject areas in business include: legal, finance, human resources, information technology, program management, engineering, operations, and business development. The accompanying technical skills have mental and physiological requirements, depending upon subject area.

When used narrowly, the terms apply to occupations. Professional occupations include accounting, architecture, consulting, law, marketing, medicine, and sales. Technical occupations include construction, engineering, and information technology. These terms are used by government agencies to classify jobs. Beware of the subject matter expert – an individual who appears knowledgeable, but lacks the technical skills to achieve results. Subject matter experts may do well in interviews, but do not necessarily perform well on the job. Hence, it is important to assess the aptitude, ability, and proficiency of a candidate before hiring, or risk being fooled.

Entrepreneurship competencies

Entrepreneurship competencies relate to the disciplines of entrepreneurship, leadership, and management. These competencies are distinct from professional competencies because they apply in both personal and professional life, and in both community-at-large and workplace settings. Entrepreneurship competencies enable value to be earned and results to be achieved. They include transforming innovative ideas into value, setting direction that others will follow, and applying resources to activities to achieve results.

Purpose Of The Study

The purpose of this paper was to provide a framework for empirical work.

Scope

The study is restricted to IT companies in South India. Due to the constraint of time and financial resources it was decided to measure few factors determining the study. The scope of the present study was limited only to one segment. The aspect of looking into different sectors from different places is beyond the scope of the study.

Objectives Of The Study

The objective of this study is to perform factor analysis and CFA for individual competencies.

Method Of Data Analysis

After data collection, this study employed following statistic techniques, like reliability and validity through CFA was used to analyze the study.

Methodology

Sources Of Data

For the present study primary and secondary data have been collected. Primary data was collected through a questionnaire and secondary data from Journals, Published reports, Books and Professional magazines.

Sample Design

Convenient sampling technique was adapted to select sample students. Chennai was selected for the study. The total no of questionnaires distributed to different companies were 300 of which 172 were received and only 151 questionnaires fulfilled the condition of the study. Mean and Standard Deviation (SD) for all the dimensions were computed and tabulated in Table 1. This enabled the researcher to compare the scores.

Factor Analysis

Aggregate data collected from all the 151 respondents from Chennai by using the instrument were factor analyzed to know its

internal structure and grouping of items. Factor analysis was used to empirically assess the dimensionality of the scales which is used for testing the hypotheses. The questions measuring the design feature of Antecedents and Consequences of Knowledge sharing were factor analyzed using the principal component method. The Bartlett's Test of Sphericity (P equal to 0.000) indicates that the correlation matrix has significant correlations among some of the variables and showed the Kaiser-Meyer-Olkin measure of sampling adequacy 0.60 is good sampling adequacy, test were used to determine the number of factors to be extracted. Nine - factor structures were suggested. This analysis was conducted by using Principal component's method with varimax rotation.

Table 1 Descriptive Statistics for Internal competencies

Name of the Dimension	(n=462)	
	Mean	SD
Personal	3.74	0.58
Disposition	4.07	0.73
Preferences	3.54	0.87
Aptitude	3.49	0.79
Health	3.46	0.47
Oral communications	3.29	0.61
Relationships with others	3.45	0.67
Occupational role	3.79	0.43

Table 2 Factor Analysis

Items	Factor	Percentage of variance	KMO
Personal Competencies	0.620	38.73 percent	0.85
Professional/Technical competencies	0.770	31.29 percent	0.80
Entrepreneurship Competencies	0.778	61.52 percent	0.60

Source: Primary Data

Confirmative Factor Analysis

The data were first analyzed by means of exploratory and confirmatory factor analyses in

order to revalidate the measuring instruments. The five instruments used in the study were all re-validated in order to determine their portability, structures and reliability. Confirmative Factor Analysis (CFA) was performed on the aggregated items of the final structures. Items were only aggregated if a factor contained more than three items. The CFA represents the actual testing of hypotheses to individual items on the instrument (Schriesheim and Eisenbach, 1995). There are many indices introduced for fitting a good model by many authors. Jaccard and Wan (1996) recommend use of at least three fit tests: Chi-square (CMIN), RMSEA and Baseline fit measures (NFI, CFI), good model comparison; Parsimannony measure (PNFI, PCFI), and information theory measures (AIC, BIC, CAI, BCC, ECVI, MECVI). Kline (1998) recommends at least four tests such as GFI, NFI or CFI, NNFI and SRMR.

The required analysis has been done with the help of the following indices.

- CMIN: Minimum sample discrepancy function.
- SRMR: The average difference between the predicted and observed variances and covariance in the model
- GFI: Goodness of Fit Index
- AGFI: Adjusted Goodness of Fit Index
- CFI Comparative Fit Index
- RMSEA: Measures based on the population discrepancy
- ECVI: Information –theoretic measures

Confirmative Factor Analysis for Internal competencies

Internal competencies were analyzed by confirmative factor analysis.

Table 3 Model fit for internal competencies

Model	Cmin/Df	Srmr	Gfi	Agfi	Cfi	Rmsea	Ecvi
Indices	5.2	0.02	0.99	0.96	0.99	0.07	0.01

Chisquare/d.f value for the model is 5.2 and is higher side. But GFI, CFI=0.99 and SRMR =0.02 are also in the highly acceptable range. The table 4.8 indicates that the ECVI value is 0.01 and it is very close to acceptable level. RMSEA is 0.07 for the internal competencies hence it is in the acceptable range. The table 1.2 indicates that the result for HOELTER'S critical-N (99% at confidence levels) of the internal competencies. Thus, there is no modification made according to the recommendation of the model modification Index.

The is 0.99 and it indicates that the model has very good fit. AGFI=0.96

New Competitive Standards

- a. Learning to learn- Foundation skills
- b. Academic Basics – Reading skills, Writing Skills, Computational Skills.
- c. Communication – Speaking Skills, Listening Skills.
- d. Adaptability –Problem Solving Skills, Creativity Skills.
- e. Development Skills –Self-Esteem Skills, Motivation and Goal setting skills, Personal and Career development skills.
- f. Group Effectiveness- interpersonal skills, Negotiation skills, Team work skills.
- g. Influencing skills- Organizational Effectiveness skills, Leadership skills.

Conclusion Anf Future Research

The results of our study, suggest that a recommended approach for acquiring companies to pursue is performing an in-depth analysis for internal competencies. It is possible to measure the impact of soft human factors. They should take into consideration the fact that such a competency system is dependant on the evolutionary development phase the companies are in and may not be in place in either company or only in one of them. At last, we are aware that there is a cluster of other variables influencing and in-depth analyses are needed. It would be interesting to compare them with our findings, which is a matter of future studies, preferably in more than one emerging economy of Central and Eastern Europe. However, our analysis does

provide a framework for a promising investigation in that field.

Questionnaire**Instrument Is A Self Assessment Of Individual Competences.****There Are Three Sets Of Questions.****Set A addresses personal competencies and conditions**

Questions 1- 25 address intra-personal (self) conditions

Questions 26-36 address inter-personal skills (communications and relationships with others)

Questions 37 – 44 – address occupational role

Set B addresses professional/technical competencies

Questions 1 – 21 address industry knowledge

Questions 22 – 40 address functional knowledge

Questions 41 - 42 address technical skills

Set C addresses enterpriship competencies

Questions 1 – 9 address management competencies

Questions 10 – 22 address entrepreneurship competencies

Questions 23 – 57 address leadership competencies

Questions 58– 100 address management competencies

Questions 101– 151 address leadership competencies

There are no wrong answers. Rate yourself on a scale of 1 (low) to 5 (high).

If a question is inapplicable – leave it blank.

Once you have completed the assessment, learn more about how to understand the personal styles of others

Planning

- 7 I establish an environment for effective policy development
- 8 I establish an environment of effective deployment and execution of plans and policies.....
- 9...and on a timely basis.....
- 10 Igenerate innovative ideas.....
- 11 I develop meaningful value propositions for my ideas

I am able to transform my innovative ideas into:

- 12 ...Effective processes
- 13 ...Beneficial products and/or services
- 14 ...Meaningful changes in the behavior of people
- 15 I am willing to adapt my innovations based upon responses from others
- 16 I am willing to enhance my innovations as changes occur in the environment
- 17 I am willing to maintain my innovations over time

Enterpriship

- 18 I am willing to discontinue my innovations when there is no longer a demand or interest in the environment
- 19 My ideas are sustainable over time.
- 20 I am consistent over time.
- 21 I am willing to standardize processes and products and/or services over time
- 22 I am willing to integrate my ideas with those of others
- 23 I am self motivated
- 24 I have ambition
- 25 I display self confidence
- 26 I display a positive attitude.....
- 27 I am willing to take risk.....
- 28 I am committed to the enterprise.....
- 29 I contribute to the values of the enterprise.....
- 30 I communicate the values of the enterprise enthusiastically.....
- 31 I live the values of the enterprise.....
- 32 I use the enterprise's guiding principles as a framework for decision making
- 33 I express a clear vision of the enterprise's future
- 34 I express a clear mission of the enterprise's purpose
- 35 I attract followers
- 36 I engage followers who are more competent than me
- 37 I engage followers who have a higher potential than me
- 38 I maintain a positive relationship with followers
- 39 I maintain a positive relationship with followers
- 40 I retain followers
- 41 I maintain focus
- 42 I create an environment for team motivation.....
- 43 I am willing to make trade-offs.....
- 44 I am clear in my assignment of tasks with

I ensure that my followers understand their tasks in terms of: followers

- 45...Budget
- 46...Schedule
- 47...Scope, objectives, and goals
- 48 ...Quality
- 49 I provide my followers with adequate resources to perform their tasks
- 50 I adapt my behavior according to the commitment and competence of my followers
- 51 I migrate from "command and control" to empowered situations as soon as my followers are willing and able
- 52 When making introductions I am entertaining
- 53 When discussing situations I am informative
- 54 When presenting my ideas I am convincing
- 55 When presenting causes for actions I am persuasive
- 56 I negotiate agreements for "win-win" situations
- 57 I close negotiations with tangible results
- 58 I am organized

- 59 I procure the resources for others efficiently and effectively: materials and supplies, services, facilities and equipment
- 60 I set objectives (meaningful statements of direction)
- 61 I set goals (quantifiable targets for the achievement of objectives).
- 62 I set stretch goals
- 63 I determine strategic initiatives to achieve objectives and goals
- 64 I develop tactical plans for each strategic initiative with budgets and schedules
- 65 I balance short-term time-to-market with long-term continuous improvement
- 66 I balance short-term time-to-market with short-term continuous improvement
- 67 I strive to reduce cycle time
- 68 I am a problem solver
- 69 I establish tolerance intervals
- 70 I respond to exceptions that are outside of tolerance norms
- 71 I test results inside tolerance norms for quality
- 72 I can tolerate discomfort
- 73 I can tolerate uncertainty
- 74 I encourage the development of alternative solutions
- 75 I build consensus
- 76 I am decisive when I cannot build consensus
- 77 I make rational decisions with knowledge of the facts
- 78 I do not make decisions based upon emotion
- 79 I make my decisions on a timely basis
- 80 I use my intuition when complete facts are not available
- 81 I communicate decisions to related parties on a timely basis
- 82 I balance time and cost with scope and quality
- 83 I identify strengths, weaknesses, opportunities, and threats and respond to them
- 84 I determine barriers to success and overcome them
- 85 I review performance against budget on a periodic basis and make adjustments accordingly
- 86 I review performance against schedule on a periodic basis and make adjustment accordingly.
- 87 I review performance against scope and make adjustments accordingly
- 88 I review performance against quality on a periodic basis and make adjustments accordingly
- 89 I know how much value has been earned at any point in time
- 90 I clearly communicate the impact of performance variances against budget and schedule
- 91 I obtain agreements as a consequence of changes in plans
- 92 I am results-oriented
- 93 I enjoy taking assessments
- 94 I have the functional knowledge to lead my organizational unit
- 95 I have the technical skills to lead my organizational unit
- 96 I have the enabling technologies to lead my organizational unit
- 97 I am continually evaluating the relationship between supply and demand in my product and business lines
- 98 I am continually evaluating the opportunity to reengineer processes and functions
- 99 I am continually evaluating the opportunity to restructure processes and functions
- 100 I am continually evaluating the opportunity to eliminate processes and functions
- 101 I respect the values of others
- 102 I strive for shared values
- 103 I respect the culture of others
- 104 I strive for multicultural and diverse environments.
- 105 I balance my personal and professional life
- 106 I encourage my followers to balance their personal and professional lives
- 107 I make decisions collectively with my followers
- 108 I make decisions collectively with my peers
- 109 I present my leaders with solutions, not problems

- 110 My organization unit is aligned with those of my peers
- 111 The units within my organizational unit are aligned with each other
- 112 My organizational unit collaborates with others
- 113 I encourage organizational learning
- 114 I encourage personal learning
- 115 Work follows smoothly and horizontally through my organizational unit
- 116 Information flows are not fragmented in my organizational unit, either horizontally or vertically
- 117 I promote an open environment.
- 118 I build teams with shared values.
- 119 I build teams with shared learning.
- 120 I build teams that are mutually accountable.
- 121 I build teams that employ complementary skills
- 122 I encourage cross-functional teams
- 123 I encourage rotation of people between functions
- 124 I encourage leaders to emerge within my organizational unit.
- 125 I assess the consequence of change over time.
- 126 My organizational unit enacts the stated values of the enterprise.
- 127 I solicit feedback regularly from my leaders.
- 128 I solicit feedback regularly from my peers.
- 129 I solicit feedback regularly from my followers.
- 130 I offer feedback regularly to my leaders.
- 131 I offer feedback regularly to my peers.
- 132 I offer feedback regularly to my followers.
- 133 I am perceived as being of high integrity.
- 134 I am perceived as being trustworthy.
- 135 My organizational unit's word is our bond.
- 136 I am easy to find
- 137 I am easy to approach.
- 138 I treat others with respect
- 139 I resolve conflict by avoiding it in the first place.
- 140 I resolve conflict by compromise.
- 141 I balance risk and reward.
- 142 I protect the enterprise's assets.
- 143 I recognize the performance of my followers with their teammates
- 144 I administer fair and justifiable incentive- based reward programs

I am dedicated to serving my constituencies:

- 145...Employees
- 146...Customers
- 147...Suppliers
- 148...Investors
- 149 I respect regulators
- 150 I have a career succession plan in place
- 151 Other individuals seek me out for advice and counsel.

-
